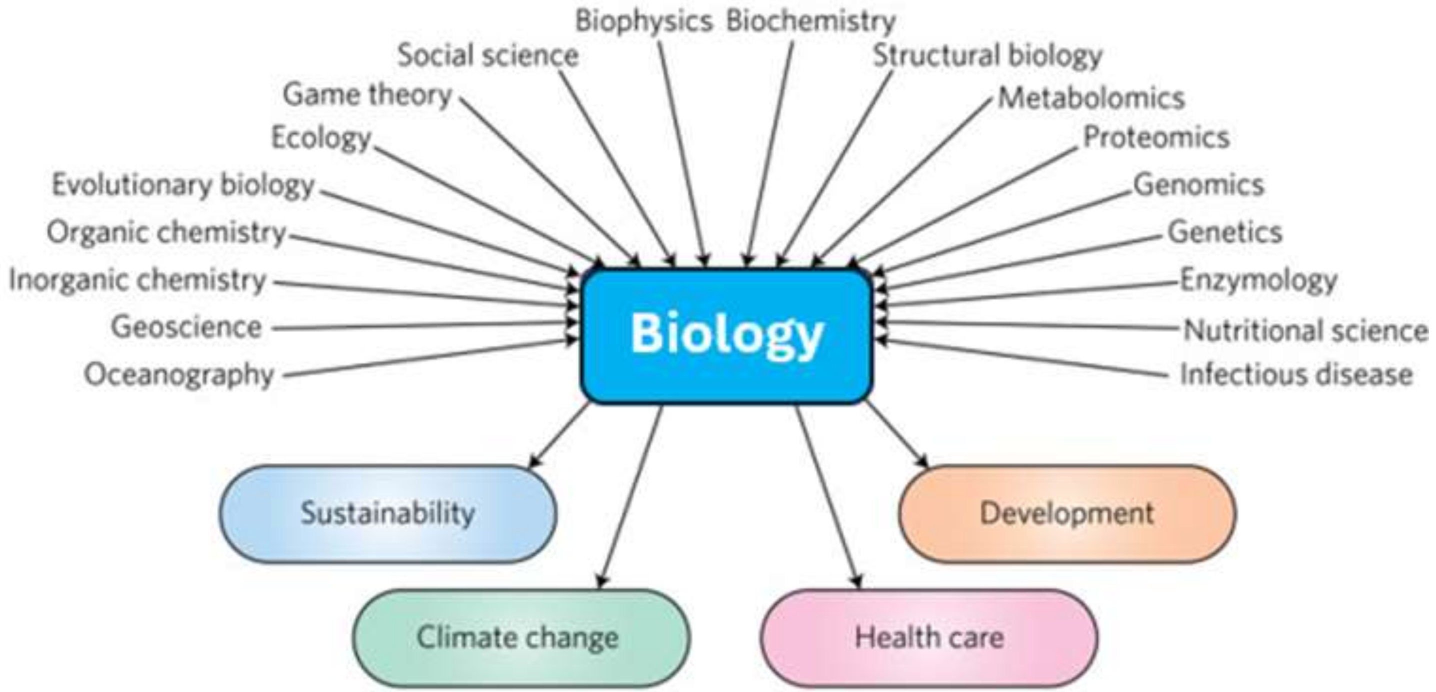
BIOLOGY IS AN INTERDISCIPLINARY STUDY



- Interdisciplinarity in biology refers to combining knowledge and methods from various scientific fields to study biological systems and address complex problems.

WHY STUDY BIOLOGY?

- Biology is crucial for understanding the causes, mechanisms, and treatments of diseases.
- Biology informs our understanding of evolution, biodiversity, and the interconnectedness of life on Earth.
- It provides the foundation for numerous careers and drives innovations in medicine, food production, and sustainable practices.

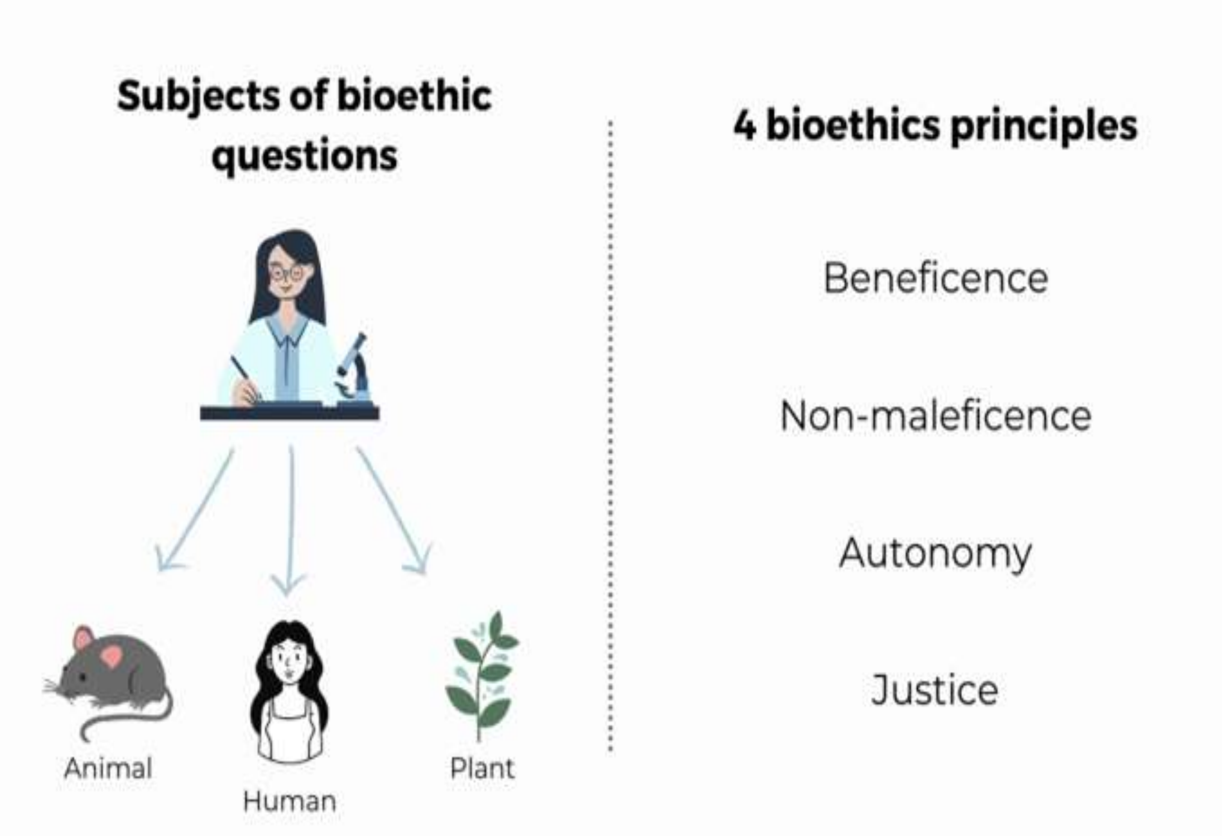
ASTROBIOLOGY

How does life begin and evolve?

Is there life beyond earth? How to work on it?

What is the future of life on earth and in the universe?

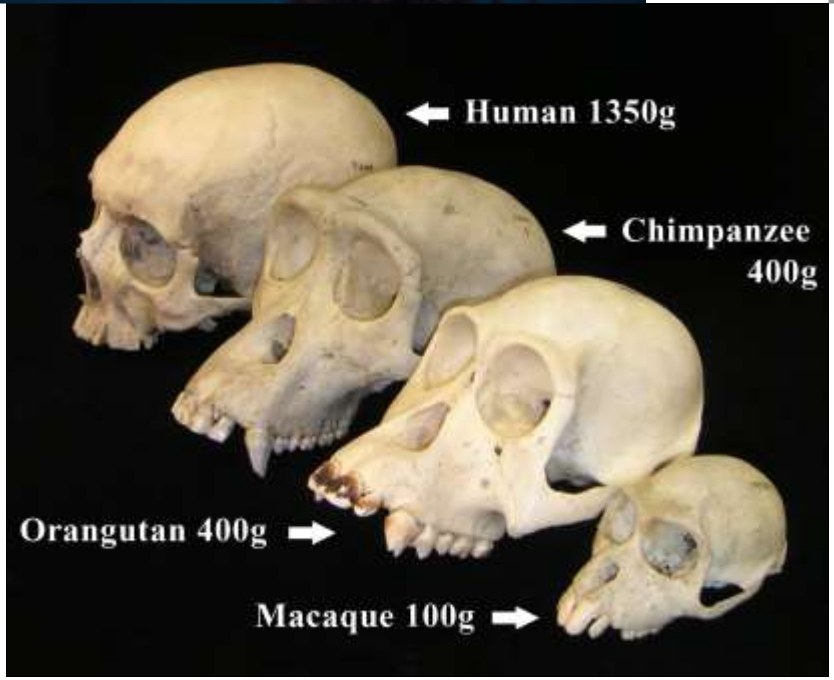
BIOETHICS



Subjects of bioethic questions
Animal
Human
Plant
4 bioethics principles
Beneficence
Non-maleficence
Autonomy
Justice

Bioethical Questions

- **Informed consent:** Ensuring patients understand and agree to medical procedures.
- **Gene editing:** The ethical implications of altering human genes.
- **Artificial intelligence in healthcare:** How AI can be used ethically and responsibly in medical decision-making.
- **End-of-life care:** Ethical considerations surrounding palliative care, assisted dying, and organ donation.
- **Research ethics:** Ensuring ethical conduct in biomedical research involving human subjects or animals.
- **Environmental ethics:** Considering the ethical implications of human activities on the environment and non-human life.



Human 1350g
Chimpanzee 400g
Orangutan 400g
Macaque 100g
